Profile

I'm a UK based Senior Engineer with 7 years of experience building and maintaining production systems. I specialise in high throughput E-commerce sites built with Laravel using FilamentPHP or Laravel Nova backend admin panels. Most of my career has been spent at The MARKET, an online classic car auction platform, where I owned everything from websocket-based live bidding to scraping infrastructure (competitor analysis) and payment integrations. I like to take on hard problems, make architectural decisions and ship reliable, well tested, maintainable code.

Technical Skills

Languages, Databases & Platforms	PHP / Javascript / Typescript / Python / Dart / MySQL / Redis / Bash / Batch / CSS3 / HTML5+ / Node.js	**Frameworks & Libraries**	Laravel / Laravel Nova / FilamentPHP / Livewire / Vue.js / Nuxt / React / Tailwind / Flutter / FastAPI / NODRIVER / curl_cffi / PHPUnit / Pest / Jest / Patchright
Search	Elasticsearch / Typesense / Laravel Scout / OpenAI Embeddings for Vector Search	**Queues**	Pusher / Laravel Horizon / Redis queues / Pessimistic locking
E-commerce & Payment APIs / SDKs	Braintree / Stripe / Amazon / eBay / OnBuy	**Cloud Infrastructure**	AWS (S3, RDS, SNS) / Cloudflare (R2, WAF, Bots, Stream) / Hetzner
DevOps	Laravel Forge / Laravel Envoyer / Laravel Cloud / Docker / Github Actions / Bitbucket Pipelines / Gitlab CI/CD	**AI Integrations**	OpenAI GPT-4 / Claude Code / Claude Design / Codex

Education

Anglia Ruskin University

BSc (Hons) Applied Computer Science - 2:1

Experience

The MARKET - Senior Software Engineer

May 2024 – Present

- Designed and built Blindspot (Laravel 13 + FilamentPHP admin panel) and Tailgate (Python scraping microservice) - an integrated competitor intelligence platform that scrapes live market pricing and identifies sales leads, dynamically ranking incoming leads against historical sale data to pre-filter high-quality prospects for consignors thereafter.
- Key owner of the business' critical main API - including but not limited to preventing bidding race conditions and making critical design decisions to ensure concurrency (via pessimistic locking).
- Built and shipped a vehicle recommendation engine powered by OpenAI's text-embeddings-large model, which used similar listings to find potentially interested customers. This contributed an estimated £90,000 in additional hammer value and an additional ~22,000 additional watchers per year (providing a high ROI for the business).
- Evaluated and executed on an infrastructure migration from AWS native services to Laravel Cloud leading to savings of around £3,000 p.a., and reducing the maintenance overhead for the team.

The MARKET by Bonhams - Software Engineer

June 2021 - May 2024

- Owned, planned and undertook the upgrade of core Laravel services (covering versions from 8 to 13), including complex dependency chain resolutions within Composer packages.
- Assisted in the development of a front-end UI UX upgrade from a pure Vue.js implementation to a new Nuxt 3 based solution.
- Lead the development and maintenance of a new Laravel Nova admin panel based around the main business API, providing rapid turnaround of feature delivery to aid tight deadline business priorities.
- Following a buyout by Bonhams, developed and supported a large volume of API and webhook integrations, providing continuous feeds of data to the parent company, to aid with metric tracking.
- Handled a complex migration of the business' core fee model (from seller based fees to buyer-based), spanning the entire platform, to support the desired Bonhams business model.

Netmatters - Junior Web Developer

March 2021 - June 2021

- Built and delivered customer facing websites and backend business systems (for clients within medical and construction industries), using Laravel.

Wordery - Junior Software Engineer

September 2019 - March 2021

- Built and maintained internal tools for fraud detection, loss making, invalid order handling and cancellation.
- Managed and developed high priority API integrations for Amazon, OnBuy and eBay.
